

Somebody knows something: Oil & Gas Modelling

Dr. Vlasios Voudouris
Director – Centre for International Business & Sustainability

CIBS & RCEM PROJECTS - Past & Future

- The ACEGES model: Fundamentals of oil and gas markets
- Brent & WTI oil prices: Probabilistic projections
- The GAMLSS framework: Regression models
- The GEST framework: Time series models
- Strategic Risks: European shale gas
- The ACEWEM model: Fundamentals of wholesale electricity markets

WHY MODEL?

- **Everyone runs some models**: Some of us run **explicit** models while others run **implicit** models
- Well designed models can be the **focal points of teams** involving experts from many disciplines
- Models can **discipline the dialogue** about (policy) options and make unavoidable judgments more considered

• ...fine but can you **accurately forecast ... ? NO**
but:

- I can **bound** outcomes to plausible ranges
- I can **illuminate** core dynamics
- I can **demarcate** core uncertainties
- I can **discover** new questions
- I can **offer** crisis options
- I can **demonstrate** tradeoffs
- I can **challenge** the robustness of energy strategies
- I can **reveal** the apparently simple to be complex (but not complicated)

ACEWEM – Agent-based model for wholesale electricity markets

WHY MODEL?

Because by joining forces, CIBS & RCEM:

- Can **bound** outcomes to plausible ranges
- Can **illuminate** core dynamics
- Can **demarcate** core uncertainties
- Can **discover** new questions
- Can **offer** crisis options
- Can **demonstrate** tradeoffs
- Can **challenge** the robustness of energy strategies
- Can **reveal** the apparently simple to be complex (but not complicated)

Thank You
